APPENDIX: INPUTS AND CAPACITIES BY ALTITUDE	9

⚠ WARNING ⚠

FIRE OR EXPLOSION HAZARD

- Failure to follow safety warnings exactly could result in serious injury or property damage.
- Installation and service must be performed by a qualified installer, service agency, or the gas supplier.
- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Leave the building immediately.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

DO NOT DESTROY. PLEASE READ CAREFULLY. KEEP IN A SAFE PLACE FOR FUTURE REFERENCE.

GENERAL INFORMATION

All gas conversion must be done by a qualified service person in accordance with these instructions and in compliance with all codes and requirements. In Canada, gas conversion shall be carried out in accordance with the requirements of the Provincial Authorities having jurisdiction and in accordance with the requirements of the CAN/CGA-B149.1 and CAN/CGA-B149.2 installation code.

Type	Form	PN
Installation/operation	I-UD&APD	195673
Replacement parts	P-UD&APD	270285

Application

These gas conversion kits are for standard power vent and separated combustion heaters equipped with either a single-stage or two-stage gas valve.

Model Identification

The identifying model number can be found on the heater rating plate. When converting fuels, it is necessary that you have the complete heater model.

The rating plate identifies only original equipment so also compare the label on the gas valve with the description listed.

Important Safety Information

Please read all information in this manual thoroughly and become familiar with the capabilities and use of your appliance before attempting to operate or maintain this unit. Pay attention to all dangers, warnings, cautions, and notes highlighted in this manual. Safety markings should not be ignored and are used frequently throughout to designate a degree or level of seriousness.

DANGER: A danger statement describes a potentially hazardous situation that if not avoided, will result in severe personal injury or death and/or property damage.

WARNING: A warning statement describes a potentially hazardous situation that if not avoided, can result in severe personal injury and/or property damage.

CAUTION: A caution statement describes a potentially hazardous situation that if not avoided, can result in minor or moderate personal injury and/or property damage.

NOTE: A note provides important information that should not be ignored.

⚠ DANGER ⚠

- **The gas burner in this gas-fired equipment is designed to provide safe complete combustion. However, if the installation does not permit the burner to receive the proper supply of combustion air, complete combustion may not occur. The result is incomplete combustion which produces carbon monoxide, a poisonous gas that can cause death.**
 - **Safe operation of indirect-fired gas burning equipment requires a properly operating vent system which vents all flue products to the outside atmosphere. *Failure to provide proper venting will result in a health hazard which could cause serious personal injury or death.***
 - **On separated combustion heaters, install either the horizontal or vertical combustion air/vent system illustrated in the heater venting manual, using the concentric adapter supplied. For all heater installations, always comply with the combustion air requirements in the installation codes and instructions. Standard Power Vent heaters installed in a confined space must be supplied with air for combustion as required by Code and in the heater installation manual. Combustion air at the burner should be regulated only by manufacturer-provided equipment. *Never restrict or otherwise alter the supply of combustion air to any heater. Maintain the vent or vent/combustion air system in structurally sound and proper operating condition.***
-

⚠ DANGER ⚠

- Improper installation, adjustment, alteration, service, or maintenance can cause property damage, injury, or death. Read the installation, operation and maintenance instructions thoroughly before installing or servicing this equipment.
- The conversion kit is to be selected and installed by a qualified service person in accordance with these instructions and in compliance with all codes and requirements of authorities having jurisdiction. Failure to follow instructions could result in death, serious injury and/or property damage. The qualified agency performing this work assumes responsibility for this conversion.

CONVERSION KIT SELECTION

Each conversion kit includes two or three spring kits and burner orifices for multiple unit sizes. Some parts will not be used—carefully select the parts to be used. Refer to [Table 2](#) for a list of natural gas to propane conversion kit components. Refer to [Table 3](#) for a list of propane to natural gas conversion kit components.

Table 2. Natural Gas to Propane Conversion Kit Components							
Unit Size	Model	Kit PN	Component	Description	PN*	Gas Valve (Manufacturer's PN)	
Common Components (Provided in All Kits)							
All			Spring kit	#393691 for single-stage valve VR8105, VR8205, or VR8305	98720	—	
			Tape	Conversion	64391		
			Disk	Propane	37752		
			Label**	High-altitude adjustment	197062		
Kit-Specific Components							
030, 045	APD, UDAP, UDAS	269835	Spring kit	#396221 for a VR8215 single-stage valve	260605	1/2-inch, single-stage (VR8105K2942, VR8205K2957, or VR8215T1239)	
			Burner orifice	1.6 mm (unit size 030)	196844		
			Plate	Air restrictor, 1-3/8-inch (35 mm) diameter opening	196845		
	UDBP, UDBS	269840	Spring kit	#396221 for single-stage valve VR8215	260605		
			Burner orifice	1.6 mm (unit size 030)	196844		
			Plate	Air restrictor, 1-3/16-inch (30 mm) diameter opening	196845		
060, 075	APD, UDAP, UDAS	269836	Spring kit	#396221 for a VR8215 single-stage valve	260605	1/2-inch, single-stage (VR8105K2942, VR8205K2957, or VR8215T1239) or 1/2-inch, two-stage (VR8105N2949 or VR8205N2921)	
			Burner orifice	2.3 mm (unit size 060)	196846		
			Burner orifice	#39 (unit size 075)	196852		
			Plate	Air restrictor, 1-3/4-inch (44 mm) diameter opening	196688		
	UDBP, UDBS	269841	Spring kit	#396221 for single-stage valve VR8215	260605		
			Spring kit	#396021 for two-stage valve VR8105, VR8205, or VR8305	197207		
			Burner orifice	2.3 mm (unit size 060)	196846		
			Burner orifice	#39 (unit size 075)	196852		
			Plate	Air restrictor, 1-9/16-inch (40 mm) diameter opening	202051		
100, 125	All	269837	Spring kit	#396221 for single-stage valve VR8215	260605	1/2-inch, single-stage (VR8205K2957 or VR8215T1239) or 1/2-inch, two-stage (VR8205N2921)	
			Burner orifice	3.0 mm (unit size 100)	196854		
			Burner orifice	3.2 mm (unit size 125)	196847		
		Plate***	Air restrictor, 1-3/4-inch (44 mm) diameter opening	196688			
		150, 175	269838	Spring kit	#396221 for single-stage valve VR8215		260605
				Spring kit	#396021 for two-stage valve VR8105, VR8205, or VR8305		197207
Burner orifice	9/64-inch (unit size 150)			196898			
			Plate***	Air restrictor, 1-3/4-inch (44 mm) diameter opening	196899		
			Plate***	Air restrictor, 1-3/4-inch (44 mm) diameter opening	196688		

*Quantity = one (1).

**Used only above 2000 feet (610 meters).

***Plate from kit PN 269837 not used on unit size 125. Plate from kit PN 269838 not used on unit size 175 for residential or commercial applications.

CONVERSION KIT SELECTION—CONTINUED

Table 2. Natural Gas to Propane Conversion Kit Components—Continued							
Unit Size	Model	Kit PN	Component	Description	PN*	Gas Valve (Manufacturer's PN)	
200, 225, 250	All	269839	Spring kit	#396221 for single-stage valve VR8215	260605	1/2-inch, single-stage (VR8205K2957 or VR8215T1239), or 3/4-inch single-stage (VR8305K4241), or 1/2-inch, two-stage (VR8205N2921 or VR8305N4297)	
				#396021 for two-stage valve VR8105, VR8205, or VR8305	197207		
			Burner orifice	4.1 mm (unit size 200)	196900		
				11/64-inch (unit size 225)	196901		
300, 350, 400		All	201732	Spring kit	#393691 for single-stage valve VR8305K	98720	3/4-inch, single-stage (VR8305K4241) or 3/4-inch, two-stage (VR8305N4297)
					#396021 for two-stage valve VR8105, VR8205, or VR8305	197207	
				Burner orifice	#8 (unit size 300)	196903	
					#3 (unit size 350)	196904	
					5.8 mm (unit size 400)	196905

100, 125	269853	Spring kit	#396222 for single-stage valve VR8215 #396205 for two-stage valve VR8105, VR8205, or VR8305	261651 197208	1/2-inch, single-stage (VR85K2959, VR8205K2965, or VR8215T5214) or 1/2-inch, two-stage (VR8105N2931 or VR8205N2913)	
		Burner orifice	#10 (unit size 100) #4 (unit size 125)	120158 196840		
150, 175	269854	Spring kit	#396222 for single-stage valve VR8215 #396205 for two-stage valve VR8105, VR8205, or VR8305	261651 197208	1/2-inch, single-stage (VR85K2959, VR8205K2965, or VR8215T5214), or 3/4-inch single-stage (VR8305N4258), or 1/2-inch, two-stage (VR8105N2931 or VR8205N2913), or 3/4-inch, two-stage (VR8305N4289)	
		Burner orifice	5.9 mm (unit size 150) E (unit size 175)	131581 196891		
200, 225, 250	269855	Spring kit	#396222 for single-stage valve VR8215	261651	1/2-inch, single-stage (VR85K2959, VR8205K2965, or VR8215T5214), or 3/4-inch single-stage (VR8305N4258), or 1/2-inch, two-stage (VR8105N2931 or VR8205N2913), or 3/4-inch, two-stage (VR8305N4289)	
			#396205 for two-stage valve VR8105, VR8205, or VR8305	197208		
		Burner orifice	6.8 mm (unit size 200)	196892		
			6.95 mm (unit size 225) L (unit size 250)	221121 208255		
300, 350, 400	201738	Spring kit	#396205 for two-stage valve VR8105, VR8205, or VR8305	197208	3/4-inch, single-stage (VR8305N4258) or 3/4-inch, two-stage (VR8305N4289)	
		Burner orifice	8.0 mm (unit size 300)	221122		
			8.7 mm (unit size 350)	221123		
			9.6 mm (unit size 400)	196897		

*Quantity = one (1).

**Used only above 2000 feet (610 meters).

INSTALLATION

Install the conversion kit in accordance with the following steps. Ensure that the kit is correct for the size of the heater being serviced (refer to [Table 2](#) or [Table 3](#)).

NOTE:

- Conversion of a unit using these kits does not alter the input rate. Refer to the rating plate on the heater for the input rate and other appropriate information.
 - If adjusted for high-altitude operation, the input rate will be affected. For high-altitude input ratings and capacities refer to the [APPENDIX](#).
-

1. Remove gas supply and electrical power.

- a. Turn off gas supply at shutoff valve outside of heater.
- b. Turn off electrical power.
- c. Open control access panel.

2. Install regulator spring kit (see [Figure 1](#) for heater component location).

⚠ WARNING ⚠

Regulator spring kits are not interchangeable. Each kit must be used only in the model and type of gas valve for which the kit is designated. Verify compatibility before installing the regulator spring kit.

- a. Select regulator spring kit that corresponds with gas valve on heater. All gas conversion kits include one or two regulator spring kits for single-stage valve and one regulator spring for two-stage valve. Other included regulator spring kits will not be used.
 - b. Install regulator spring kit in accordance with gas valve manufacturer's instructions (included with regulator spring kit).
-

NOTE: After a new regulator spring kit is installed, it is necessary to adjust the spring for correct manifold pressure. This adjustment can be made only after the heater is in operation (refer to step 7).

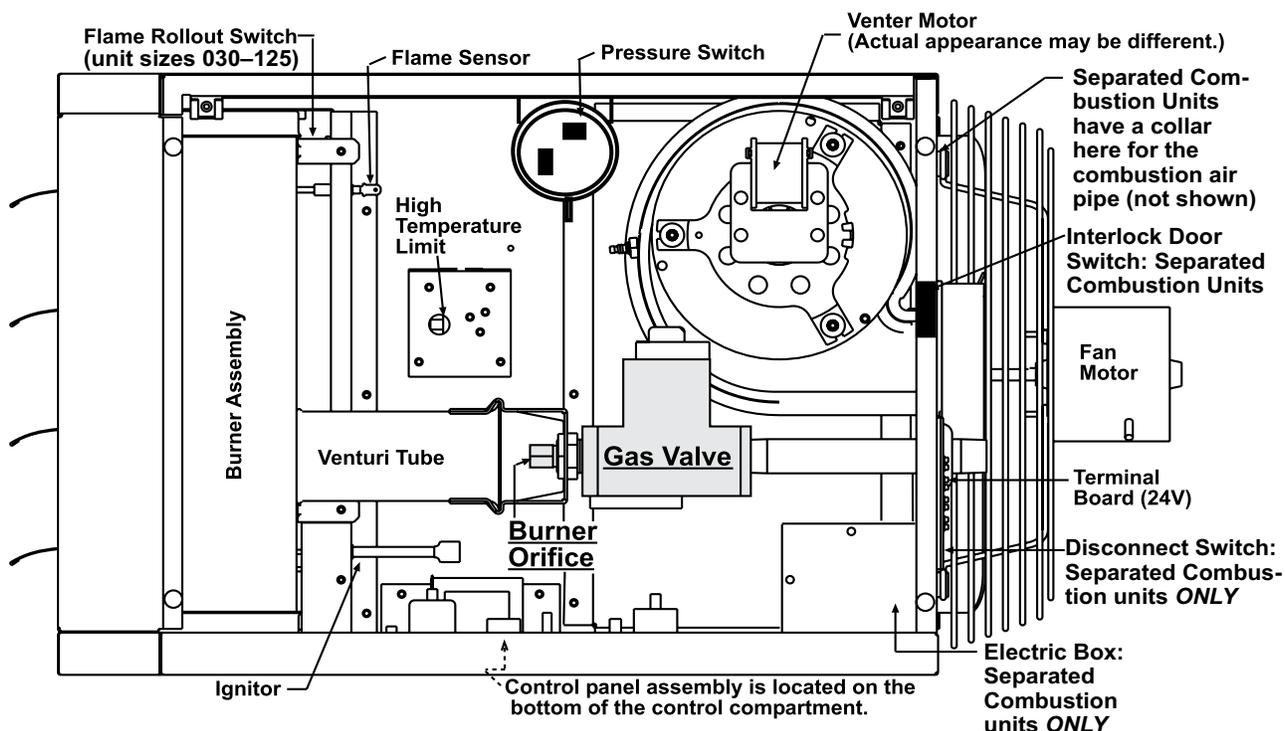

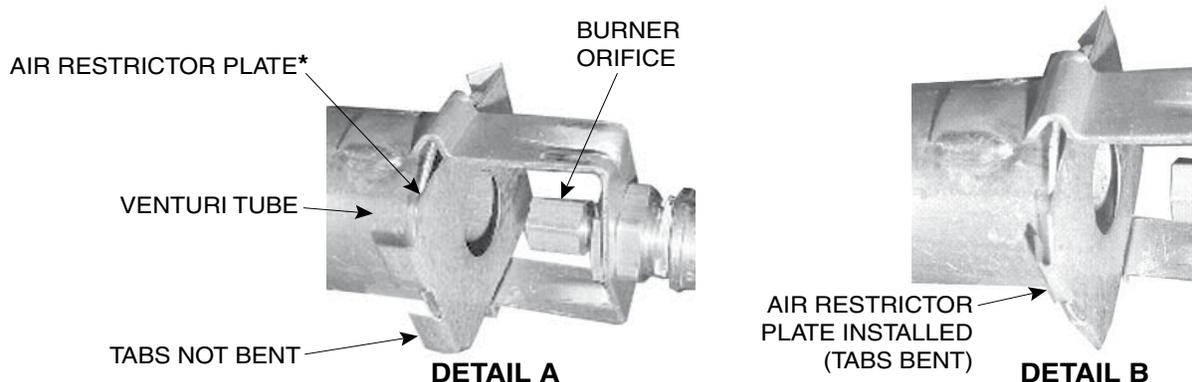

Figure 1. Heater Components

INSTALLATION—CONTINUED

3. Remove or install air restrictor plate as necessary and replace burner orifice.

- a. Carefully remove existing burner orifice (see [Figure 2](#), DETAIL A).

*USED ONLY ON PROPANE UNITS: MODELS UDAP, UDAS, UDBP, AND UDBS (UNIT SIZES 030, 045, 060, 075, 100, AND 150) AND MODELS UDBP AND UDBS (UNIT SIZE 125).

Figure 2. Burner Orifice and Air Restrictor Plate

⚠ DANGER ⚠

- The air restrictor plate **MUST BE INSTALLED** when converting models UDAP, UDAS, UDBP, and UDBS (unit sizes 030, 045, 060, 075, 100, and 150) and models UDBP and UDBS (unit size 125) to propane.
- The air restrictor plate **MUST BE REMOVED** when converting models UDAP, UDAS, UDBP, and UDBS (unit sizes 030, 045, 060, 075, 100, and 150) and models UDBP and UDBS (unit size 125) to natural gas.
- For these models/unit sizes, the failure to install or remove the air restrictor plate in accordance with the following directions can cause death or injury and/or property damage.

- b. For models UDAP, UDAS, UDBP, and UDBS (unit sizes 030, 045, 060, 075, 100, and 150) and models UDBP and UDBS (unit size 125), proceed to step c. For all other models/unit sizes, proceed to step e.
- c. If converting from propane to natural gas, remove air restrictor plate as follows. If converting from natural gas to propane, install air restrictor plate in accordance with step d.
 - (1) See [Figure 2](#) to locate air restrictor plate held in place on venturi tube by its bent tabs.
 - (2) Use pliers to carefully unbend tabs as shown in [Figure 2](#), DETAIL A and remove air restrictor plate.
- d. For natural gas to propane conversion, install air restrictor plate as follows:
 - (1) Refer to [Table 2](#) or [Table 3](#) to select correct air restrictor plate. Slide plate in place over venturi tube opening so that its 45-degree angle is hooked over rear of venturi tube (see [Figure 2](#)).
 - (2) While holding plate in position, use pliers to carefully bend tabs to lock plate in place (see [Figure 2](#), DETAIL B). Ensure that air restrictor is aligned and secure.
- e. For all conversions, select replacement burner orifice that has marking required for size of heater being converted (refer to [Table 4](#)). All conversion kits include two or three burner orifices. Other included orifice(s) will not be used.

⚠ WARNING ⚠

Do not attempt to drill burner orifice. Use factory-supplied orifice only.

- f. Install replacement burner orifice (see [Figure 2](#), DETAIL A).

Table 4. Burner Orifice Markings

Orifice ID	Unit Size													
	030	045	060	075	100	125	150	175	200	225	250	300	350	400
Natural Gas														
PN	196853	196838	196839	196855	120158	196840	131581	196891	196892	221121	208255	221122	221123	196897
Marking	#37	#30	3.7 mm	#19	#10	#4	5.9 mm	E	6.8 mm	6.95 mm	L	8.0 mm	8.7 mm	9.6 mm
Propane														
PN	196844	196845	196846	196852	196854	196847	196898	196899	196900	196901	196902	196903	196904	196905
Marking	1.6 mm	#48	2.3 mm	#39	3.0 mm	3.2 mm	9/64"	#24	4.1 mm	11/64"	#14	#8	#3	5.8 mm

⚠ CAUTION ⚠

If the heater will be operated at an elevation above 6,000 feet (1,830 meters), a high-altitude pressure switch must be installed.

NOTE:

- If the installation location is above 6,000 feet (1,830 meters), verify that the altitude on the rating plate or high-altitude label is above 6,000 feet (1,830 meters). If the rating plate or label does not indicate an altitude above 6,000 feet (1,830 meters), order and install the appropriate high pressure switch kit.
- If the heater is equipped for installation above 6,000 feet (1,830 meters) and is being installed at a lower elevation, order and install the appropriate switch.
- Contact your distributor to select the factory-authorized replacement part.

4. Replace pressure switch.

- a. Locate pressure switch in control compartment (see [Figure 1](#)) and mark and disconnect two pressure switch wires.
- b. Mark and disconnect sensing tube(s) from pressure switch.
- c. Remove two screws that secure mounting bracket and remove bracket and pressure switch. Save bracket and screws for reuse.
- d. Install replacement pressure switch using mounting bracket and two screws. Reconnect sensing tube(s) and wires.

5. Restore electrical power and gas supply.

- a. Turn on electrical power.
- b. Turn on gas supply and relight heater, following instructions on heater.

6. Perform leak test.

- a. Check all connections for gas leaks using commercial leak-detecting fluid or rich soap and water solution. Leaks are indicated by presence of bubbles.
- b. If leak is detected, tighten connection. If leak cannot be stopped by tightening connection, replace part(s).

7. Adjust manifold (outlet) pressure.

- a. Refer to [Table 5](#) to determine required manifold pressure for elevation where heater will be operated. If elevation is unknown, check with local gas company.

⚠ WARNING ⚠

Manifold gas pressure must never exceed 3.5 IN WC for natural gas or 10 IN WC for propane.

NOTE: A manometer (fluid-filled gauge) is recommended for measuring manifold pressure—rather than a spring-type gauge—due to the difficulty of maintaining the calibration of a spring-type gauge. Use a water column manometer readable to the nearest tenth-inch.

INSTALLATION—CONTINUED

- b. Turn knob or switch on top of gas valve to OFF. Connect manometer to 1/8-inch outlet pressure tap (see [Figure 3](#)).
- c. Turn knob or switch on top of gas valve to ON and remove cap from regulator screw.
- d. For two-stage low-fire manifold pressure adjustment, disconnect wire from HI terminal on valve before adjusting regulator screw. Reconnect wire to HI terminal when required outlet pressure (refer to [Table 5](#)) is achieved.

Table 5. Manifold Pressure Settings by Altitude					
Altitude		Single-Stage and Two-Stage High-Fire		Two-Stage Low-Fire	
Feet	Meters	Natural Gas	Propane	Natural Gas	Propane
		Required Manifold Pressure (IN WC)			
Installation in US					
0–2000	0–610	3.5	10.0	1.8	5.0
2001–3000	611–915	3.1	8.8	1.6	4.4
3001–4000	916–1220	3.0	8.5	1.5	4.2
4001–5000	1221–1525	2.8	8.1	1.5	4.1
5001–6000	1526–1830	2.7	7.7	1.4	3.9
6001–7000	1831–2135	2.6	7.4	1.3	3.7
7001–8000	2136–2440	2.5	7.1	1.3	3.5
8001–9000	2441–2745	2.4	6.7	1.2	3.4
9001–10,000	2746–3045	2.3			
Installation in Canada					
0–2000	0–610	3.5	10.0	1.8	5.0
2001–4500	611–1373	2.8	8.1	1.5	4.1

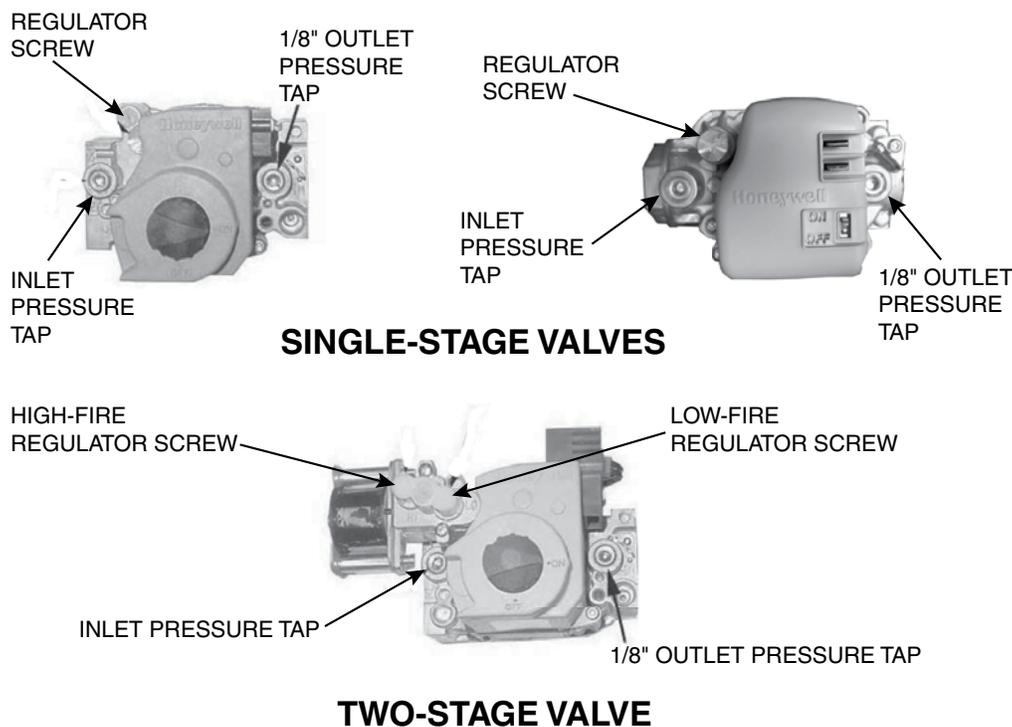

Figure 3. Manifold Pressure Adjustment

⚠ CAUTION ⚠

DO NOT bottom out the gas valve regulator adjusting screw. This can result in unregulated manifold pressure that can cause excess overfire and heat exchanger failure.

- e. For all gas valves, adjust outlet pressure by turning regulator screw IN (clockwise) to increase pressure or OUT (counterclockwise) to decrease pressure. See [Figure 3](#) to determine which regulator screw (low-fire or high-fire) to adjust for two-stage valves.

- f. When manometer reading indicates that required pressure has been achieved, turn up thermostat (on models UDAS and UDBS, depress and hold door safety switch).
- g. Cycle burner once or twice to properly seat adjustment spring in gas valve and recheck outlet pressure. When pressure corresponds to [Table 5](#), disconnect manometer and install cap on regulator screw.
- h. Check for leakage at 1/8-inch outlet pressure tap fitting. Correct as necessary.
- i. Connect manometer to inlet pressure tap (see [Figure 3](#)). While heater is operating, measure inlet pressure, which should be between 5 and 13.5 IN WC for natural gas or between 10 and 13.5 IN WC for propane.
- j. If inlet pressure is not between 5 and 13.5 IN WC for natural gas or between 10 and 13.5 IN WC for propane, inlet pressure must be corrected and manifold (outlet) pressure must be rechecked.

NOTE: The high-altitude adjustment label is not used on units operated at elevations of 2,000 feet (610 meters) or below.

- k. If gas valve has been adjusted for operation above 2,000 feet, use permanent marker to fill in appropriate input and capacity information (from [APPENDIX](#)) on high-altitude adjustment label (from conversion kit). Select location for label on outside of heater access panel that will be conspicuous to anyone operating or servicing unit. Ensure that surface is clean and dry and affix label.
 - l. Observe heater operation for at least one complete cycle to check for safe and proper operation (on models UDAS and UDBS, depress and hold safety door switch).
8. Fill in required information on gas conversion tape (from conversion kit). Select location near rating plate, ensure that surface is clean and dry, and affix tape to heater.
9. Close control access panel.

APPENDIX: INPUTS AND CAPACITIES BY ALTITUDE

Inputs and Capacities by Altitude in US							
Altitude		Normal Input (BTUh)	Thermal Output Capacity (BTUh)	Minimum Input (BTUh)	Normal Input (BTUh)	Thermal Output Capacity (BTUh)	Minimum Input (BTUh)
Feet	Meters
