

REZNOR®

**The Best
Vertical Air
Handler Solution -
No "Twinning"**

The Competitive Edge

What is the Reznor Edge?

The Reznor Edge: Contractors can avoid “twinning” two smaller units to provide the amount of heating and cooling required by using one Model CAUA.

- Pre-wired (no kits required)
- Single point electrical connection
- Single gas connection
- Single supply duct
- Single vent pipe
- Higher static pressure capability
- Up to 100% outside air capability

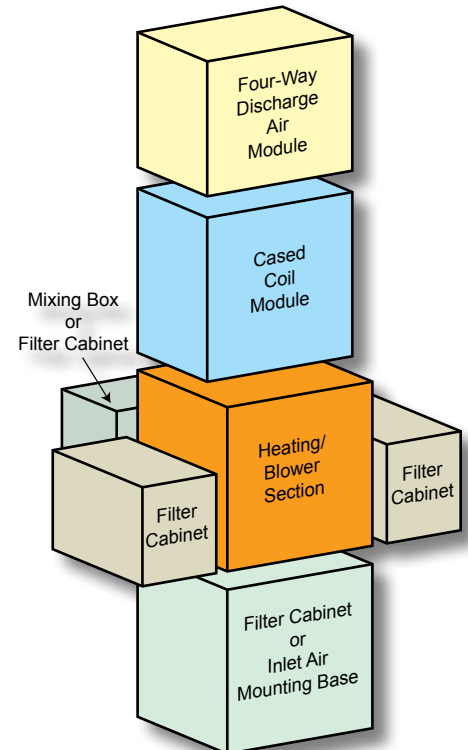

Model CAUA has many advantages not normally found on light commercial HVAC equipment. It has the robust capability of a commercial unit with a compact, configurable footprint.

The compact size allows this unit to fit through most any standard mechanical room door. There have been many applications where Model CAUA units have replaced massive HVAC equipment that had to be disassembled to be removed from a basement or mechanical closet.

Model CAUA is designed as a modular concept. It can provide heating, cooling, filtered return air, outside makeup air and even air destratification when selected with the discharge air plenum module and the mounting base.

When paired with Reznor Model MASA condensing unit, Model CAUA can provide three stage cooling to match the cooling load. This provides the right amount of cooling without over cooling the space or wasting energy.

Model CAUA provides a versatile, vertical air handler solution for many light commercial applications.
