Gas Conversion Kit Instructions

Applies to: Model LDAP

General and Warnings

FOR YOUR SAFETY

- WHAT TO DO IF YOU SMELL GAS
 - Do not try to light any appliance.
 - Do not touch any electrical switch; do not use any phone in your building.
 - Leave the building immediately.
 - Immediately call your gas supplier from a phone remote from the building. Follow the gas supplier's instructions.
 - If you cannot reach your gas supplier, call the fire department.

All gas conversion must be done by a qualified service person in accordance with these instructions and in compliance with all codes and requirements. In Canada, gas conversion shall be carried out in accordance with the requirements of the Provincial Authorities having jurisdiction and in accordance with the requirements of CSA-B149.1 and .2 installation code.

WARNING

Improper installation, adjustment, alteration, service, or maintenance can cause property damage, injury, or death. Read the installation, operation, and maintenance instructions thoroughly before installing or servicing this equipment.

FOR YOUR SAFETY : The use and storage of gasoline or other flammable vapors and liquids in open containers in the vicinity of this appliance is hazardous.

DANGER

The conversion kit is to be selected and installed by a qualified service person in accordance with these instructions and in compliance with all codes and requirements of authorities having jurisdiction. Failure to follow instructions could result in death, serious injury and/or property damage. The qualified agency performing this work assumes responsibility for this conversion.

HAZARD INTENSITY LEVELS used in this manual.

- 1. DANGER: Failure to comply will result in severe personal injury or death and/or property damage.
- 2. WARNING: Failure to comply could result in severe personal injury or death and/or property damage.
- 3. CAUTION: Failure to comply could result in minor personal injury and/ or property damage.

DANGER

The gas burner in this gas-fired equipment is designed to provide safe, <u>complete combustion</u>. However, <u>if the installation</u> does not permit the burner to receive the proper supply of combustion air, complete combustion may not occur. The result is <u>incomplete combustion</u> which produces carbon monoxide, a poisonous gas that can cause death.

Safe operation of indirect-fired gas burning equipment requires a properly operating vent system which vents all flue products to the outside atmosphere. FAILURE TO PROVIDE PROPER VENTING WILL RESULT IN A HEALTH HAZARD WHICH COULD CAUSE SERIOUS PERSONAL INJURY OR DEATH.

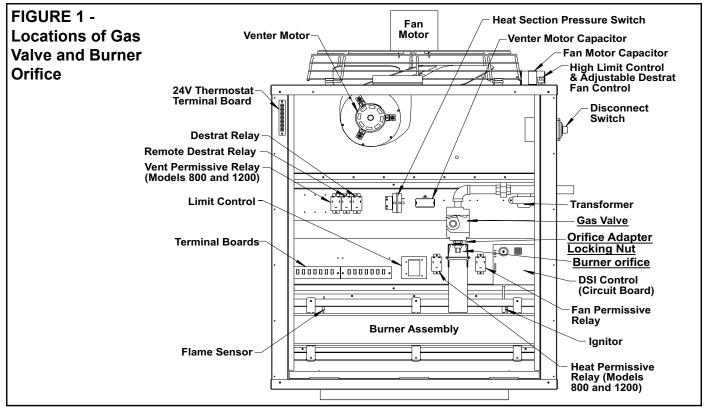

For all heater installations, always comply with the combustion air requirements in the installation codes and instructions. Model LDAP units installed in a confined space must be supplied with air for combustion as required by Code and in the heater installation manual. Combustion air at the burner should be regulated only by manufacturer-provided equipment. NEVER RESTRICT OR OTHERWISE ALTER THE SUPPLY OF COMBUSTION AIR TO ANY HEATER. MAINTAIN THE VENT SYSTEM IN STRUCTURALLY SOUND AND PROPER OPERATING CONDITION.

Application and Kit Selection

Gas Conversion Instructions The gas conversion kits in these instructions are for Model LDAP Size 400, 800, and 1200 heaters equipped with a single-stage or a Size 400 heater with a two-stage gas valve. See page 4 for a list of conversion kit components.

1. Check kit contents for agreement with the parts list and the size of heater being serviced. (See the parts lists and application for each kit on page 4.)

Conversion of a unit using these kits will not alter the input rate. Refer to the rating plate on the heater for input rate and other appropriate information. (**NOTE:** If adjusted for high altitude operation, input rate will be affected; for high altitude input ratings and capacities refer to **TABLE 2**, page 4.)

- 2. Turn off the gas supply at a shutoff valve outside of the heater and turn off the electrical supply. Open the control access panel.
- 3. Install the Regulator Spring Kit (valve conversion kit)

To install the spring regulator conversion kit, follow the valve manufacturer's installation instructions that are included with the spring conversion kit. After a new regulator spring kit is installed, it is necessary to adjust the spring for the correct manifold pressure. This adjustment can only be made after the heater is in operation; instructions are included in Step No. 6.

WARNING

Regulator spring kits are not interchangeable. Each spring kit must be used only in the model and type of valve for which the kit is designated. Verify compatibility before installing the regulator spring kit.

4. Install Burner Orifice

WARNING

Do not attempt to drill orifice. Use factorysupplied orifice only. Remove the factory-installed orifice and install the burner orifice from the kit. When removing or replacing a burner orifice, use two wrenches being careful not to damage the venturi tube and/or the bracket.

- 5. Turn on the electric and the gas. Relight, following the instructions on the heater. Check for gas leaks using a commercial leak detecting fluid or a rich soap and water solution. Leaks are indicated by the presence of bubbles. Check all connections. If a leak cannot be stopped by tightening, replace the part.
- **6. Adjust the manifold pressure.** Follow these requirements and instructions to adjust manifold gas pressure.
- 1) The correct pressure adjustment depends on the elevation at the installation. If you don't know the elevation, check with your local gas company.
- 2) See **TABLE 1** and determine the required manifold pressure.
- 3) See **FIGURE 2** and locate the 1/8" outlet pressure tap on the valve. Turn the knob on the top of the valve to "OFF". Connect a manometer to the 1/8" pipe outlet pressure tap in the valve. Use a water column manometer that is readable to the nearest tenth of

TABLE 1 - ManifoldPressures by Altitude

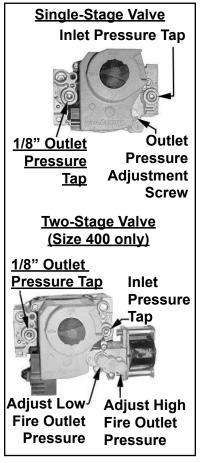

WARNING

Manifold gas pressure must never exceed 3.5" w.c. for natural gas or 10" w.c. for propane.

| Manifold Pressure Settings by Altitude for the UNITED STATES | | | | | | | | |
|--|-----------|---|-----------------------|---|-----------------------|--|--|--|
| Altit | ude | Natural Gas (inch | es w.c.) | Propane (inches w.c.) | | | | |
| Feet | Meters | Single Stage and Two Stage High Fire | Two Stage Low Fire | Single Stage and Two Stage High Fire | Two Stage Low Fire | | | |
| 0-2000 | 0-610 | 3.5 | 2.0 | 10.0 | 5.6 | | | |
| 2001-3000 | 611-915 | 3.1 | 1.7 | 8.8 | 5.0 | | | |
| 3001-4000 | 916-1220 | 3.0 | 1.7 | 8.5 | 4.8 | | | |
| 4001-5000 | 1221-1525 | 2.8 | 1.6 | 8.1 | 4.6 | | | |
| 5001-6000 | 1526-1830 | 2.7 | 1.5 | 7.7 | 4.4 | | | |
| 6001-7000 | 1831-2135 | 2.6 | 1.5 | 7.4 | 4.2 | | | |
| 7001-8000 | 2136-2440 | 2.5 | 1.4 | 7.1 | 4.0 | | | |
| 8001-9000 | 2441-2745 | 2.4 | 1.3 | 6.7 | 3.8 | | | |
| 9001-10000 | 2746-3045 | 2.4 | 1.3 | 6.7 | 3.6 | | | |

| Manifold Pressure Settings by Altitude for CANADA | | | | | | | | |
|---|----------|---|-----------------------|---|-----------------------|--|--|--|
| Altit | ude | Natural Gas (inch | es w.c.) | Propane (inches w.c.) | | | | |
| Feet | Meters | Single Stage and Two Stage High Fire | Two Stage Low Fire | Single Stage and Two Stage High Fire | Two Stage Low Fire | | | |
| 0-2000 | 0-610 | 3.5 | 2.0 | 10.0 | 5.6 | | | |
| 2001-4500 | 611-1373 | 2.8 | 1.6 | 8.1 | 4.6 | | | |

FIGURE 2 - Top View of Valves identifying Pressure Taps and Adjustment Screws

an inch. (NOTE: A manometer (fluid-filled gauge) is recommended rather than a spring type gauge due to the difficulty of maintaining calibration of a spring type gauge.)

4) Single Stage and Two Stage High Fire - Turn the knob on the top of the valve to "ON". Remove the cap from the pressure adjusting screw and adjust the manifold pressure to the pressure selected from TABLE 1. Adjust pressure by turning the regulator screw IN (clockwise) to increase pressure or OUT (counterclockwise) to decrease pressure.

<u>**Two Stage Low Fire**</u> - Disconnect the wire from the "HI" terminal on the gas valve and check the low fire pressure. Turn the regulator screw to adjust the low fire outlet pressure to the "Low Fire" pressure selected from **TABLE 1**. Re-connect the wire to the gas valve.

CAUTION: DO NOT bottom out the gas valve regulator adjusting screw. This can result in unregulated manifold pressure causing excess overfire and heat exchanger failure.

5) Turn up the thermostat. Cycle the burner once or twice to properly seat the adjustment spring in the valve.

Re-check the pressure(s). When the outlet pressure is right for the installation, remove the manometer and replace the cap.

Check for leakage at the pressure tap fitting.

- 6) With the heater operating, determine that the inlet pressure to the heater is between 5 and 13.5 inches w.c. for natural gas or between 10 and 13.5 inches w.c. for propane. Take this reading as close as possible to the heater. (The gas valves have an inlet pressure tap; see **FIGURE 4**.) If the inlet pressure is not within the specified range, the inlet pressure must be corrected and the manifold (outlet) pressure re-checked.
- 7) If the gas valve has been adjusted for operation above 2000 ft, find the High Altitude Adjustment label in the kit. Using a permanent marker, fill-in the appropriate information from **TABLE 2**, **page 4**. Select a location for the label on the outside of the heater access panel so that it will be conspicuous to anyone operating or servicing the unit. Be sure the surface is clean and dry and adhere the label. (**NOTE**: At altitudes from 0-2000ft/0-610M, this label is not used.)

WARNING

If the heater will be operated above 6000 ft (1830M), a high altitude pressure switch (Option DJ20) must be installed.

7. Check for safe and proper operation of the heater by observing operation for at least one complete cycle.

Instructions (cont'd)

8. Fill in the information required on the gas conversion tape. Select a location near the rating plate. Be sure the surface is clean and dry and affix the tape to the heater. Close the access door.

TABLE 2 - Inputs and Capacities by Altitude

| BTUH Inputs & Capacities by Altitude in the UNITED STATES for Model LDAP | | | | | | | | | | |

The identifying model number can be found on the heater rating plate. When converting fuels, it is necessary that you have the complete heater model. The rating plate identifies original equipment only so also compare the label on the gas valve with the description listed. If the description differs, before proceeding, contact your distributor.
